Knowledge check

1. Which NuGet package is used to interact with data in Azure Cosmos DB for NoSQL from a .NET application?

Microsoft.Azure.WebJobs.Extensions.CosmosDB

Microsoft.Azure.Cosmos

This library is the official SDK to manage data in an Azure Cosmos DB for NoSQL account.

Azure.ResourceManager.CosmosDB

2. After importing the `Azure.AI.OpenAI` library and namespace, which class is used to connect to an Azure OpenAI endpoint and model deployment?

`OpenAiClient`

The `OpenAiClient` class is a client class to connect to Azure OpenAI and make data-plane requests.

`Completions`

`ChatMessage`

3. Which property is required to be the same of all items in a transactional batch within Azure Cosmos DB for NoSQL?

eTag

Unique identifier (id)

Partition key

The partition key value of each item must match exactly within a transactional batch. If an item in the batch has a different partition key value, the transactional batch fails.
